WORK EXPERIENCE

Software Engineer (Frontend Lead)   2020 – Present

i2c, Lahore, Pakistan

- Spearheaded the development and maintenance of highly secure and production-quality applications, serving over **1 million users** daily for transactions worth billions, ensuring seamless payment processing experiences.
- Built secure and reusable software for fin-tech companies using **React, Next.js, Spring Boot**, and **Java**. Enhanced operations for banks, providing seamless user experiences to **millions** of users.

Web Developer (Top Rated)   2019 – 2020

Upwork, London, England

- Recognized as a **Top Rated** freelancer with a track record of delivering web projects on time, earning **5-star reviews** for exceptional work, and maintaining a **100% job success** score.
- Leveraged **React, Next.js**, and **Node.js** to develop high-performance web applications for diverse client projects on Upwork, meeting precise website requirements.
- Demonstrated exceptional communication with clients, delivering regular progress updates and surpassing expectations through outstanding work quality, leading to long-term client retention.

PROJECTS

Payment Processing Applications for i2c Inc
- Developed and maintained **SaaS** banking applications, including new module development, bug fixing, QA, and code reviews. Used by **500+ banks** worldwide, serving millions of daily customers.
- **Mentored junior developers**, providing support and conducting **code reviews** resulting in high code quality standards which led to a **20% decrease** in bugs.
- Led seamless migration of **15+ client websites**, collaborating with cross-functional teams to modify templates and features based on specific requirements.

Linkedin Manager (Chrome extension)
- Led the successful development and design of a highly customized **Chrome extension** for millions of recruiters worldwide.
- Crafted an intuitive and user-friendly **UI/UX with React**, yielding an outstanding **95%** customer satisfaction rate in surveys.
- Revitalized extension performance, refined module communication, and propelled recruiter productivity using Redux, achieving a remarkable **40% reduction** in candidate search time.

Resource Management System for Fintech Companies

- Took charge as the **Frontend lead** to develop a new employee management system for **500+** Companies with the help of the **NextJs** framework.
- Developed a robust system centralizing employee management, consolidating all functions into a powerful portal, resulting in improved efficiency and heightened productivity.
- Leveraged **Next.js** for server-side rendering (SSR), reducing load times by 30% and improving user experience.
- Translated **Figma** designs into production-ready code using modern UI frameworks, ensuring an accurate representation of visual designs and delivering visually appealing user interfaces.

Medicure

- Engineered a responsive **Hospital management system** for three user roles, optimizing daily operations and improving patient care.
- Accomplished a **30% reduction** in administrative tasks through automation and optimized workflows, enabling healthcare professionals to prioritize patient care.
- Improved appointment scheduling efficiency by implementing a real-time calendar system, resulting in a **40% decrease** in scheduling errors and ensuring smooth coordination between doctors and clients.

Pet Aid

- Constructed a React application enabling pet owners to book appointments seamlessly, integrating secure payment processing via **Stripe**, resulting in a **30% increase** in appointment bookings.
- Implemented **Amazon Chime** for video calls with veterinarians, improving accessibility and reducing the need for in-person appointments by 40%.
